Future Flight Scenario Report

Baseline Trends

- Baseline Trend 1: More geopolitical wars, disrupting the supply of key materials and components
- Baseline Trend 2: Water/food scarcity due to climate change

Scenario Matrix

Driver 1
Public sees the increased
convenience of Future
Flight technologies

	Driver 1	
Driver 2 Businesses focus more on society and the environment	**Scenario 1** Businesses align with societal and environmental values. Sustainable innovations flourish. Decentalised supply chains are built to resist geopolitical shocks. FF technologies are adopted, propelled by the convenience.	**Scenario 2** Driven by the capital, businesses keep advancing technologies to enhance daily convenience. While the new consumer market is on the rise, the underlying problems of suply chains and resource scarcity are lurking in the background.
	Scenario 3 Businesses prioritise addressing the societal and environmental needs, yet hampered by the limited access to the most advanced FF technologies development.	**Scenario 4** Capital-driven businesses and restricted access to FF technologies exacerbate geopolitical tensions. Investments in military applications overshadows the societal and environmental needs, leading to conflicts between military-industrial and civilian needs.

Alternative Driver 2
Businesses continues to
focus on capital

Alternative Driver 1
Future Flight technologies
are limited to industrial /
military applications
